BRAND GUIDELINES · VERSION 1.0

Nethorix

Network Guard

Know who is on your network.

Developed by Samiru Ninduwara

A watchful guard for your network, for people who are not network engineers.

Nethorix is the name of the app. The app watches the devices on your Wi-Fi or LAN and tells you when one appears that you have not approved.

Watchful

It keeps scanning and records every unknown device with time, MAC, IP and manufacturer.

Calm

One banner, one state. Green means nothing to do; red means look now.

Plain

Short words: ALL SAFE, ALERT, STOPPED. No jargon, no scare tactics.

Local

Runs on your Windows PC. Reports are saved in a folder on your computer.

BRAND LINE

Know who is on your network.

What Nethorix - Network Guard actually does.

Learn

Learn devices saves every device connected right now as known.

Watch

Start monitoring scans the subnet on a timer you set (Scan every N sec) and compares it with the known list.

Recognise

Shows the manufacturer when it can, and flags private (random) MAC addresses as a possible false alarm.

WHEN AN UNKNOWN DEVICE APPEARS

On screen

Red banner, a row in the alert table, and a beep on the PC.

Email

Optional. Sent to the address in Alert settings.

Arduino

Optional. Red LED and buzzer for 6 s on an alert, green LED for 6 s when safe. Hold the button 3 s to reset.

Phone

Optional dashboard in a browser on the same Wi-Fi, protected by a PIN.

Every alert is kept in an Excel report (`alerts_report.xlsx`) with summary charts; File > Export saves a copy as Excel or CSV. Light and dark themes. Windows only.

One mark: shield, signal, lock, alarm.

Nethorix

Network Guard

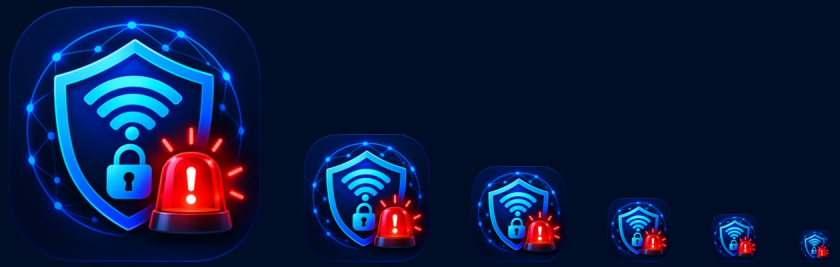

ANATOMY

Shield: protection
Wi-Fi arcs: your network
Padlock: security
Red beacon: the alarm, the only red in the mark

SPACE AND SIZE

Clear space: 1/8 of the icon width. Minimum 24 px on screen; the .ico also includes 16 px.

Icon sizes

Never

One mark: shield, signal, lock, siren.

ANATOMY

Shield — protection.
Wi-Fi arcs — your network.
Padlock — security and access control.
Red siren — the alarm. It is the only red in the mark: red always means alert.

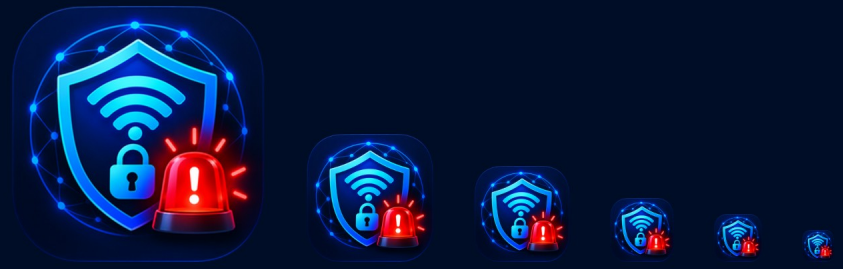

CLEAR SPACE

Keep at least 1/8 of the icon width free on every side.

MINIMUM SIZE

24 px on screen (16 px only for the Windows icon).

Sizes in the .ico

Never

Deep navy, signal cyan, and two colours that mean something.

CONTRAST, MEASURED (WCAG)

- Cyan on Midnight · **13.1:1**
- White on Navy · **17.3:1**
- Red on Midnight · **4.6:1**
- White on Safe Green · **5.1:1**
- White on Alarm Red · **4.2:1**, large bold text only

Rule: red = alert, green = safe. Never use either for decoration, and never use colour alone: always add the word.

Technical, but friendly.

DISPLAY · SPACE GROTESK 700

Small · 14 / 21

Caption · 12 / 16

DATA EXAMPLE

`fc-a6-21-23-80-2a`

`172.21.149.144`

In the Windows app, where web fonts are not available, use Segoe UI for text and Consolas for data.

Every state has one colour, one word, one signal.

ALL SAFE

Every device on the network is known.

`Green LED`

ALERT

An unknown device is connected.

`Red LED + buzzer`

UNKNOWN DEVICE

A row in the alert table.

`Log + notification`

RANDOM MAC

Private address, may be a false alarm.

`Amber row`

NOT MONITORING

Waiting or stopped.

`All lights off`

Alert behaviour

A new unknown device restarts the red LED and buzzer. They stop by themselves after a few seconds so the alarm never becomes noise; the red banner stays until the device leaves.

Accessible by design

Colour is always paired with a word. Do not rely on red versus green alone.

One look across desktop, phone and inbox.

DATA EXAMPLE

`fc-a6-21-23-80-2a`

`172.21.149.144`

The Windows app itself uses the system fonts (Segoe UI, Consolas for logs). These typefaces are for brand material.

Every state has one colour and one word.

ALL SAFE	ALERT: 1 unknown device(s)	SCANNING...	LEARNING...	STOPPED
No unknown devices.	An unknown device is connected.	Monitoring is checking the network.	Saving current devices as known.	Monitoring is off.

Unknown device row
Alert table, MAC not on the known list

Random MAC row
Private address, may be a false alarm

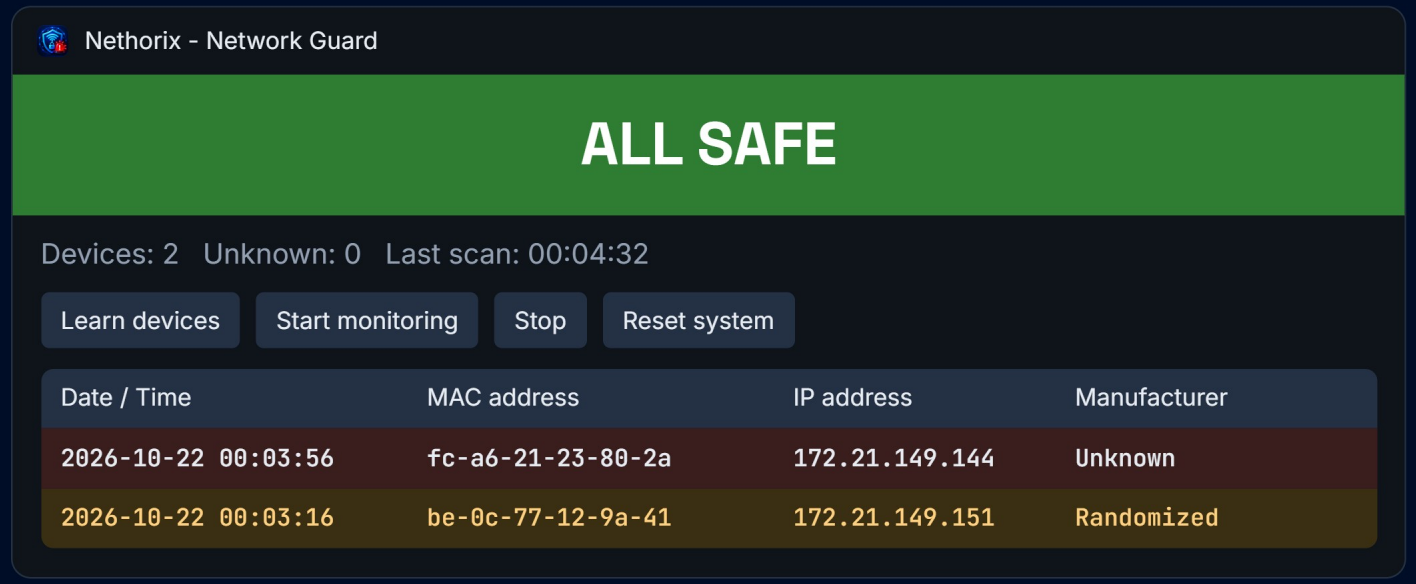

Optional Arduino

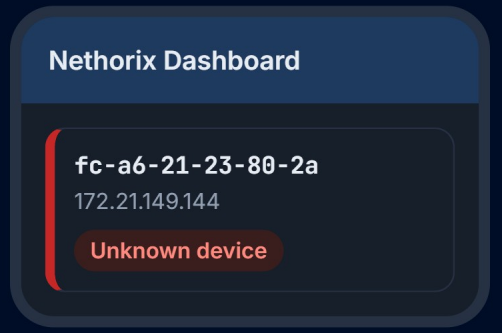

Green LED for 6 s when the network is safe. Red LED and buzzer for 6 s on an alert (the times are set in the Arduino sketch). After a reset the green LED blinks three times.

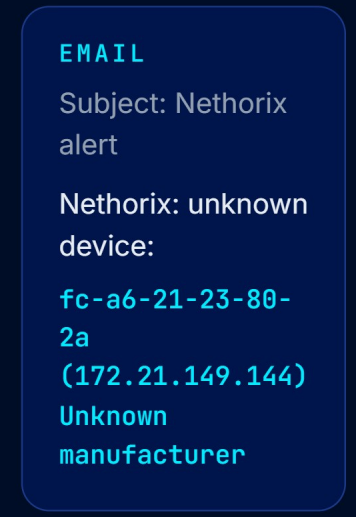

Never colour alone

Each state carries its words (ALL SAFE, ALERT, STOPPED) so it reads without colour.

Desktop, phone browser, email.

Mock-ups follow the real window, dashboard and email text.

Say what happened. Keep it calm.

SAY

Unknown device detected.

All unknown devices disconnected: back to ALL SAFE.

Monitoring started.

AVOID

DANGER!!! You are being hacked!

Intruder breach critical.

Something went wrong.

TERMS

Known device: on your list.
Unknown device: not on your list.
Learn devices: save the devices connected now.
Reset system: clear alerts and the known list.

NAME

Full name: **Nethorix - Network Guard** (spaced hyphen).
Short name: **Nethorix**.

Show "Developed by Samiru Ninduwara" in the app footer, About window, installer and documents.

Name

Write **Nethorix - Network Guard**. Do not add the ® sign: the name is not registered.

License in plain words

- Free for personal, home and small-office use
- The unmodified installer may be shared for free
- No selling, renting or bundling into a paid product
- Author name, copyright and product name stay in place
- No decompiling or modifying, except where the law allows
- Only on networks you own or may monitor
- Provided "as is": no guarantee that every device is caught

Privacy

- No analytics; nothing is sent to the author
- Settings, known devices and reports stay on your PC
- Internet is used only for email alerts, sent through the Gmail account you enter
- The phone dashboard is reachable on your local network, behind your PIN

Third-party components

Python (PSF License), Tcl/Tk, pySerial (BSD 3-Clause), openpyxl (MIT), PyInstaller (GPL 2.0 with exception). Manufacturer list: IEEE Registration Authority.
